

Strategies for Determining an Open Sourcing Policy

Who are we

Janessa Worrell

GitHub: jkworrell

Manager, Professional Services

- Project Management Professional (PMP) Certified
- Scrum, Kanban and Waterfall
- Heckling developers
- Full project lifecycle

Barrett Smith

D.O: Barrett

Twitter: ba66e77

GitHub: ba66e77

Manager, Technical Services

- APIs
- OpenGov/Data
- Machine Learning
- Long walks on the beach
- Good documentation

What we'll be talking about

Considerations needed to determine an open sourcing policy that results in

- Happy clients
- Happy developers
- Happy community

Categories of Questions to Ask

- Who
- What
- When
- Where
- How
- Why

Full list of questions at : <https://github.com/ba66e77/os-strategies>

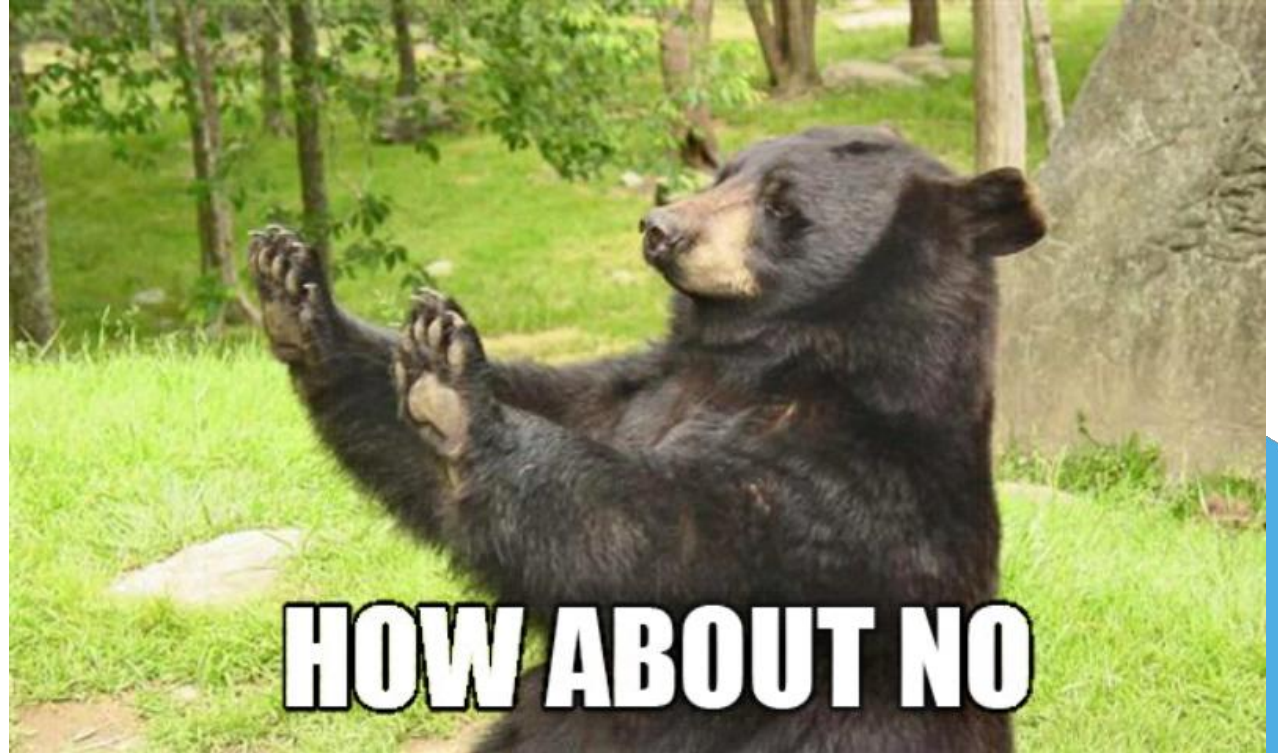

When...

- should we determine the policy?
 - Yesterday, if not sooner
- Why so early?
 - Often need input from multiple groups
 - Answers can influence how development is done.

Why...

- are we Open Sourcing?
 - Organizational policy
 - Transparency
 - Glory
 - Community participation
 - Free labor*

"The community will do the work for me."

How...

- much of an investment are we willing to make in this code?
 - Abstraction has a time cost
 - Maintaining an open sourced project has a time cost
 - Evaluating patches and PRs
 - Responding to issues

Who...

- can respond to issues posted?

How are they going to respond?

- Guidelines for tone
- *Plan for trolls and h8ers*

< Code Issues 15 Pull requests 9 Pulse Graphs Settings

Filters - is:issue is:open Labels Milestones New issue

<input type="checkbox"/>	15 Open	2 Closed	Author -	Labels -	Milestones -	Assignee -	Sort -
<input type="checkbox"/>	Minor layout issue in presidential greetings request. Is this the right repo?						
<input type="checkbox"/>	Where is SixteenHundredNav?						
<input type="checkbox"/>	Child process NSA holding NIC in promiscuous mode.						
<input type="checkbox"/>	This could be a hardware problem, a faulty logic board may be causing multiple issues here						
<input type="checkbox"/>	Rebuild House Indexes						
<input type="checkbox"/>	Broken Patterns						
<input type="checkbox"/>	Poorly structured enum causing repeated failures in .Freedom as well as .Government modules						
<input type="checkbox"/>	Bug: Default log level too high						
<input type="checkbox"/>	Known						
<input type="checkbox"/>	found coding error easy fix						
<input type="checkbox"/>	Feature Request: World Peace						
<input type="checkbox"/>	Repeating error keeps appearing. Blames past administration or other parties for every issue.						
<input type="checkbox"/>	From DoD						
<input type="checkbox"/>	Proposal: start from scratch						
<input type="checkbox"/>	Remove obsolete states						

Lack of troll plan can lead to response stagnation

Where...

- are we going to release it?
 - Drupal.org
 - Github
 - Agency website

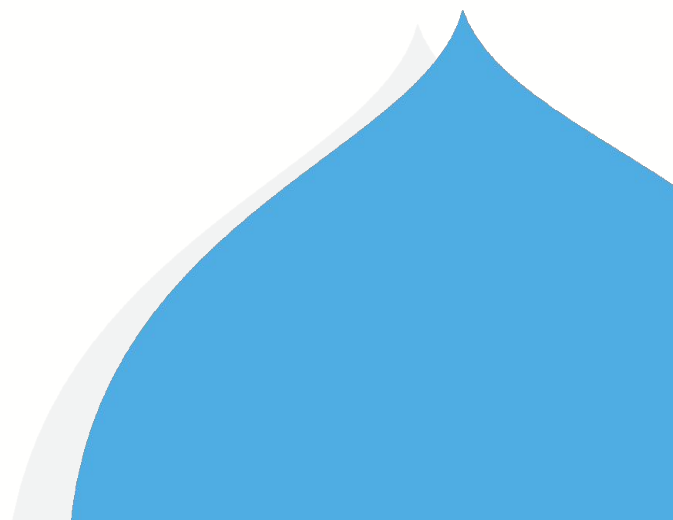

Who "owns" the code?

- Sponsoring agency
- Development shop
- Individual developers

What...

- are we considering releasing?
 - patches or bug fixes
 - modules/themes
 - distribution
 - data or documents

Example Approaches

Transparency

- Single release, no maintainership
- Low LOE
- Where
 - GitHub
 - Disable issue queue
 - Make clear in README that this is abandoned code released for transparency
 - Example: White House budget data repo
<https://github.com/WhiteHouse/budgetdata/tree/2017>
 - Agency website or other static source
 - Example: Census.gov America's Economy
 - <http://www.census.gov/mobile/economy/>

Agency Sponsored but not Owned

- Allows agency to get credit but not incur on-going burden
- Where
 - Drupal.org
 - Identify developers to maintain or mark as need maintainer
 - Example: DOJ modules
 - <https://www.drupal.org/us-department-of-justice>

The screenshot shows the Drupal Marketplace interface. At the top, the Drupal logo is displayed on a blue background with a grid pattern. Below the logo, there are links for "Log in / Register". The main content area is titled "Marketplace" and features a navigation menu with tabs for "Services", "Hosting", "Supporting Technologies", "Training", "Books", and "Partner Programs". The selected tab is "Services". Below the navigation, the page title is "U.S. Department of Justice". The URL <http://www.justice.gov> is shown. Under "Sectors", "Government" is listed. Under "Locations", "United States" is listed. Under "Headquarters", "Washington, DC" is listed. The mission statement is: "The U.S. Department of Justice mission is to to enforce the law and defend the interests of the United States according to the law; to ensure public safety against threats foreign and domestic; to provide federal leadership in preventing and controlling crime; to seek just punishment for those guilty of unlawful behavior; and to ensure fair and impartial administration of justice for all Americans." Under "Projects supported", the following are listed: "Migration Tools, OG File, Services Government Format, Government warning, GovDelivery subscribe, Redirect File, Locale Path Ignore, User Account Permissions, Context Everywhere, Context Per OG, DigitalGov Search (machine name: USASearch)". At the bottom, it states "Credited on 1 issue fixed in the past 3 months" with a bullet point: "Fieldable Panels Panes (FPP), 1 issue".

Active Maintainership

- Comparatively high LOE
- Where
 - Drupal.org (optionally mirrored from GitHub)
 - Disable D.O issues and link to GitHub issue queue
 - Example: Lightning distro

Lightning

The distribution for Enterprise Authoring

curated by [Acquia](#)

The intent of Lightning is to **enable developers to create great authoring experiences and empower editorial teams**. We do this by providing a lightweight framework, documentation and best practice examples for building working solutions in Drupal.

In **Drupal 8**, we have taken advantage of new D8 functionality and tightly coupled functional areas we consider to make up the new standard for enterprise authoring in Drupal including Layout, Preview, Workflow and Media. We have also embedded hundreds of automated tests allowing developers to implement continual integrations pipelines that monitor major functionality, essentially providing a safe environment to innovate with their own custom code additions to Lightning.

8.x - Recommended Installation

We highly recommend using [Composer](#) to build and maintain your Lightning-based project's codebase.

```
composer create-project acquia/lightning-project:^8.1.0 MYPROJECT --no-interaction
```

Install with Composer

For more information on creating and maintaining your Lightning project with composer, see our [Lightning Project README](#).
